On June 5-8, 2011, the English Language Faculty of Engineering of the Technical University of Sofia held its annual ninth international conference “Challenges in Higher Education and Research in the 21st Century” (CHER21-11). The conference continued the almost decade tradition for presentation and publication of the recent scientific and pedagogical research of faculty members, partner organizations, colleagues involved in teaching at English Language Faculty of Engineering, and guests.

The scope of the conference covered following areas:
- Education through and for excellence in research
- Higher engineering education
- Measurement and control
- Information technologies and e-Management
- Computer aided engineering
- Design and manufacturing
- Business and marketing
- Humanities role

The conference brought together participants from Bulgaria, Romania, United Kingdom, Spain and Colombia.
This volume, the 9-th of the series, includes 82 papers of the talks presented at the annual conference of English Language Faculty of Engineering.

The editors of this volume would like to thank to all the conference speakers and all the authors in this volume for their contributions.

Editors: asho Tashev, Radoslav Deliyski, Badea Lepadescu

RELATIONS BETWEEN SELF REGULATED LEARNING STYLES AND ACADEMIC PERFORMANCE

Ana-Maria Cazan 1)
1) University Transilvania of Brasov, Faculty of Psychology and Education Sciences, Nicolae Balcescu, no 56, 50019 1000 Brasov, Romania,
E-mail: ana.cazan@unitbv.ro

Abstract: Self-regulated learning concerns the application of general models of regulation and self-regulation to issues of learning that takes places in classroom contexts. The aim of this research is to investigate to what extent the academic performance of the first year students is related with the various learning activities that students employ and to investigate some of the psychometric properties of the Romanian version of ILS (Inventory of Learning Style). The analyses concluded that students' learning patterns are associated with personal and contextual factors, such as the type of academic discipline, academic achievement and age.

Key words: academic performance, higher education, patterns of learning, self regulated learning.

1. Theoretical background

Self-regulated learning concerns the application of general models of regulation and self-regulation to issues of learning, in particular, academic learning that takes places in school or classroom contexts. There are a number of different models of self-regulated learning that propose different constructs and different conceptualizations. A general working definition of self-regulated learning is that it is an active, constructive process whereby learners set goals for their learning and then attempt to monitor, regulate, and control their cognition, motivation, and behavior, guided and constrained by their goals and the contextual features in the environment [1].

One author [9] offers an overview of the characteristics of the students’ self-regulation processes, presenting eight skills, which are important to self regulation processes:
- setting specific proximal goals for oneself;
- adopting powerful strategies for attaining these goals;
- monitoring one’s performance;
- restructuring one’s learning environment to make it compatible with one’s goals;
- managing one’s time effectively;
- self-evaluating one’s methods;
- attributing results to causation;
- adapting future methods.

This article focuses on relations between student learning styles and performance variables. A student learning pattern is defined as a students' position on four learning components: cognitive processing strategies, metacognitive regulation strategies, conceptions of learning, and learning orientations [6].

In research using the Inventory of Learning Styles (ILS), researchers [7] found four learning patterns: meaning directed learning, reproduction directed learning, application directed learning, and undirected learning:
- meaning-directed learning is defined by relating, structuring, and processing the subject matter critically, self-regulation of learning processes and contents, construction of knowledge as learning conception, and personal interest as learning orientation;
- reproduction directed learning comprises memorising and rehearsing, analysing, external regulation of learning, certificate and self-test-directed learning orientations, a learning conception in which learning is viewed as the intake of existing knowledge;
- application-directed learning is characterized by concrete processing, vocational learning orientation, and a learning conception stressing the use of knowledge;
- undirected learning is defined by lack of regulation, an ambivalent learning orientation,
and a learning conception in which great value is attached to cooperation with fellow students and to stimulating education [6], [7].

The author of ILS [5] defines learning styles as consisting of four aspects: processing strategies, regulation strategies, mental models of learning and learning orientations. Processing strategies are thinking activities used to process information in order to obtain certain learning results such as knowing the most important points in the study material. Regulation strategies are activities used to monitor, to plan and to control the processing strategies and their own learning processes. Mental models of learning are conceptions and misconceptions students have about learning processes. Learning orientations are personal aims, intentions, expectations, doubts, students may experience during their educational career. To measure these learning styles, the Inventory of Learning Styles (ILS) was developed, a diagnostic instrument intended to measure aspects of study method, study motives and mental models about studying in higher education.

Concerning the relation between self regulated learning and academic performance, the results reported in recent research are controversial. Undirected learning was negatively related to academic performance. Meaning-directed learning showed a positive association with performance and the other two patterns (reproduction-directed and application-directed learning) showed no relation [2]. Other researchers obtained weak correlations between self regulated learning skills and academic performances, they sustain the fact that between the two variables there is an indirect relation, which is mediated by other variables such as intelligence [4] motivation [8] and prior achievement [3].

2. Research questions

The aim of this research is to investigate to what extent the academic performance in the first years of higher education is related with the various learning activities that students employ. Therefore, the present study aimed to answer the following question:

How student learning patterns are related to different indicators for academic performance, such as:
- mean of exam scores at the end of the first semester and
- mean of exam scores for one fundamental subject matter: educational psychology.

Another important aim was to investigate some of the psychometric properties of ILS (Inventory of Learning Style).

3. Method

The study was conducted on a sample of 172 first year students, enrolled at the Faculty of psychology and Education Sciences.

The general exam scores and the score for educational psychology exam were obtained for all the participants in order to investigate their relation with the self regulated learning strategies.

ILS - Inventory of Learning Styles [5] was administered to all participants. We used the ILS version published by the author in 1998, which we translated and adapted for the Romanian population.

The ILS consists of 120 statements that cover 4 learning components: cognitive processing strategies, metacognitive regulation strategies, conceptions of learning, and learning orientations. These 120 items generates 20 scale variables: five processing strategies, five regulation strategies, five conceptions of learning, and five learning orientations. The five processing strategies are: deep processing comprising relating and structuring, and critical processing, stepwise processing comprising memorizing and rehearsing, and analyzing, and concrete processing. The regulation strategies are: self regulation comprising self regulation of learning process and results, self regulation of learning content, external regulation of learning process and external regulation of learning results and lack of regulation. The five conceptions of learning are the following: construction of knowledge, intake of knowledge, use ok knowledge, stimulating education, and co-operative learning. Finally, the five learning orientations are the following: personally interested, certificate oriented, self-test oriented, vocation oriented, and ambivalent.
An example of a processing strategy statement, belonging to the subscale “relating and structuring” is: *I try to combine the subjects that are dealt with separately in a course into one whole.* An example of a regulation strategy statement, belonging to the subscale “self-regulation of learning processes and results” is: *to test my learning progress, I try to answer questions about the subject matter which I make up myself.* An example of a learning orientations statement, belonging to the scale “certificate directed” is: *the main goal I pursue in my studies is to pass exams.* An example of mental models of learning statement, belonging to the scale “stimulating education” is: *the teacher should motivate and encourage me.* [5] The Alfa Cronbach coefficients for the Romanian version are presented in the following section.

### 4. Results

One of the aims of this study was to investigate the psychometric properties of ILS, after the translation and the adaptation for the Romanian population.

These results confirmed the fact that ILS is a highly consistent and a reliable instrument and its psychometric properties are acceptable even after the Romanian translation. The Alfa Cronbach coefficients are high, as showed in Table 1, comparable to those obtained for the original version.

Another important aim was to identify to what extent student learning patterns are related to different indicators for academic performance. The response to these questions could be also considered an indicator of the predictive validity for ILS, considering mean scores as an external criterion of analysis, mainly for the self regulation scale.

The Pearson correlation showed weak but statistically significant coefficients between academic performances and ILS scales, especially for the processing strategies and for the regulation strategies (Table 2). Regulating one's own learning processes through regulation activities like planning learning activities, monitoring progress, diagnosing problems, testing one's results, adjusting, and reflecting, consulting literature and sources outside the syllabus are characteristics of a high academic adjustment. As expected, the correlations are not high, results that are sustained by previous research. These results can be explained by the lack of other important variables not included in the study, which can mediate this relation, namely the academic motivation and the orientation of learning goals.

Strategies such as memorizing and rehearsing showed a negative correlation with mean exam score, results which confirm the fact that high academic performance is sustained mostly by the use of complex learning strategies, or deep learning strategies. Rehearsing and memorizing assure only a surface learning not efficient for obtaining good grades.

* p < .05, ** p < .01

Regarding the conceptions of learning, we obtained negative correlation between academic performance and co-operative learning; thus, attaching a lot of value to learning in cooperation with fellow students and sharing the tasks of learning with them is not associated with high academic performance. An explanation can be the individualistic orientation of Romanian educational assessment system which encourages mostly competition between students and performance orientated goals rather than collaborative learning and mastery orientated goals.

Also, the doubtful, uncertain attitude toward the studies or toward one's own capabilities is negatively correlated with academic achievement. Thus ambivalent learning orientation is stronger for those students with low academic achievement. Contrarily, studying to acquire professional skill predicts a high level of academic performance.

There are also some differences between the coefficients correlations regarding the exam scores obtained for the overall academic performance or for the educational psychology subject matter. Variables such as stimulating education, personally interested, and vocation interested are positively associated with the academic performance at educational psychology, revealing the fact that these variables are more relevant if they are analyzed in a specific context of learning rather than in a general context. Being one of the fundamental subject matter for the first year students, educational psychology sustain an orientation of studying out of interest in the course subjects but to develop oneself as a person.

Regarding the learning styles, meaning directed learning was positively associated with academic performance: r(147) = .19, p = .05. Reproduction directed learning showed no relation with exam performance: r(146) = .01, p = .96. Application directed learning was weakly correlated with exam performance: r(147) = .12, p = .05. Finally, undirected learning was negatively and consistently associated with academic performance: r(146) = -.21, p = .03.

Personal factors that could affect learning are also included in the analysis: specialization and age.

The independent t test showed no significant differences between the two categories of students (Psychology students and Education Sciences students) regarding the processing strategies and the self regulation strategies. Although, we found two significant differences: for the vocational orientation scale and for the ambivalent learning orientation. Thus, education sciences students have a higher level of vocation orientation t(149) = 1.98, p = .04. Psychology students have higher level of ambivalent learning orientation t(148) = 2.42, p = .01. We can conclude that psychology students have a higher level of incertitude regarding their academic choice and their vocation.

Given the high amplitude for the age of the participants in the study, (R = 29, min = 19,
max = 48), with a mean age of 22, we formulate a second hypothesis regarding the association between age and self regulation of learning. We found interesting results showing that age is positively associated with the increase of self regulation strategies. The significant Pearson coefficients are given below:
- Deep processing – r(144) = .38, p < .001;
- Analyzing - r(146) = .24, p = .003;
- Concrete processing – r(147) = .25, p = .003;
- Self regulation of learning – r(146) = .23, p = .005;
- Certificate oriented – r(144) = -.27, p = .001;
- Vocation oriented – r(144) = .18, p = .03;
- Ambivalent - r(144) = -.32, p < .001;
- Construction of knowledge – r(144) =.23, p = .005.

These results show that self regulated learning and deep processing strategies increase with age. The negative correlation between age and certificate orientation is an indicator of the increase of intrinsic motivation. Studying to pass examinations and to obtain certificates, credit points, and a degree becomes less important than studying to test one's own capabilities. Also, the uncertain attitude toward the studies decreases with age while learning viewed as constructing one's own knowledge and insights increases.

5. Conclusions

An important conclusion refers to the extent to which ILS can be considered a valid instrument for assessing self regulated learning. The results showed that the Romanian version of ILS has good psychometric properties. Further research is needed in order to tests the factorial structure of the inventory.

From the analyses reported above it can be concluded that students' learning patterns are associated with personal and contextual factors, such as the type of academic discipline, academic achievement and age.

Concordant with previous research [5], [7], we found that the way students regulated their learning processes, showed relative little direct relations with academic performance. Self-regulation strategies showed some positive relations. External regulation strategies showed no relations. It seems that for exam achievements, it was less important whether learning processes were regulated internally or externally, as long as they were regulated in some way [5], [7].

3.04.doc. CONFOCAL MICROSCOPY. Kasabova-Ivanova G., Kalimanova I.
3.05.doc. DESIGN OF FUZZY PID CONTROLLER FOR THERMAL PLANT. Snejana Yordanova
3.06.doc. ANALYSIS OF PRECISION AND ENERGY LOSES IN CONTROL SYSTEMS. E. Nikolov, N. Nikolova, VI. Trachlieva
3.07.doc. IDENTIFICATION OF A HEATING PROCESS IN A COMPUTER-ASSISTED ELECTRIC FURNACE. Ghimbaseanu Ioan
3.08.doc. RISK MANAGEMENT IN THE VALVES DESIGN. Dinu Mirela
3.09.doc. MAINTENANCE OF VALVES. Dinu Mirela
3.10.doc. LIQUID DENSITY MEASUREMENT WITH DIFFERENTIAL PRESSURE SENSOR. Georgi Nikolov, Boyanka Nikolova, Marin Marinov
3.11.doc. SPICE MODELLING OF CURRENT TRANSFORMERS. Boyanka Nikolova, Georgi Nikolov
3.12.doc. DYNAMIC PROGRAMMING APPLICATION IN INVENTORY CONTROL. Andrey Yonchev, Sami Hickorkmaz, Teofana Puleva, Krasimira Filipova

Section 4. Information technologies and e-Management
4.01.doc. COMPARISON BETWEEN OBJECT-RELATIONAL AND OBJECT-ORIENTED DATABASES. CASE STUDY. Daniela Gotseva, Loie Naser Mahmud Nimrawi
4.02.doc. AN APPROACH OF OBJECT DATABASE MODELING. Daniela Gotseva, Loie Naser Mahmud Nimrawi
4.03.doc. INFORMATION SECURITY AND E-GOVERNMENT. Georgi Popov, Roumen Trifonov, Tasho Tashev
4.04.doc. DIVERSITY GPS SYSTEM WITH INCREASED RELIABILITY. George Popov, Levent Mehmed, Tasho Tashev
4.05.doc. E-VOTING SMART MAPPING. Roumiana Ilieva
4.06.doc. E-EMPLOYMENT ONTOLOGY AND TAXONOMY. Roumiana Ilieva

Section 5. Computer aided engineering
5.01.doc. AGENT-ORIENTED ANALYSIS AND DESIGN FOR RESOURCE MANAGEMENT. Adelina Aleksieva
5.02.doc. VIRTUALITY AND THE FUTURE OF ENTERPRISE INTEGRATION. Luminita Popa, Delia Ungureanu
5.03.doc. INTELLIGENT INFORMATION TECHNOLOGIES USED IN COMPUTER AIDED MANUFACTURING SYSTEMS. Luminita Popa, Delia Ungureanu
5.04.doc. COMPUTER PROGRAM FOR THE SINGLE-SAMPLING PLAN BY ATTRIBUTES FOR TYPE-B OC CURVES. Nicolae Eftimie
5.05.doc. COMPUTER PROGRAM FOR THE CONTROL CHART FOR NONCONFORMITIES PER UNIT WITH VARIABLE SAMPLE SIZE. Nicolae Eftimie

Section 6. Design and manufacturing
6.01.doc. NEW TYPES OF EQUATORIAL SPHERICAL HYPOCYCLOID AUTOMATIC MACHINE. Răzvan Răceu
6.02.doc. A NEW SUBCLASS OF EQUATORIAL SPHERICAL HYPOCYCLOID AUTOMATIC MACHINE. Răzvan Răceu, Cosmina Pöllner
6.03.doc. A NEW VERSION OF A DOUBLE SCREW MECHANICAL VULCANIZING PRESS. Cosmina Pöllner
6.04.doc. KINEMATIC STRUCTURES FOR PROCESSING OF SURFACES WITH A CIRCLE DIRECTRIX AND A STRAIGHT LINE GENERATRIX (PART III). Romeo Cioara
6.05.doc. KINEMATIC STRUCTURES FOR PROCESSING OF SURFACES WITH A CIRCLE DIRECTRIX AND A STRAIGHT LINE GENERATRIX (PART II). Romeo Cioara
6.06.doc. NEW MECHANICAL VULCANIZING PRESSES WITH SCREW. Cosmina Pöllner, Răzvan Răceu

6.07.doc. STRUCTURE AND DEVELOPMENT OF THE PROGRAMMABLE DEVICES AND SOFTWARE PRODUCTS FOR SYSTEM DESIGN. Tsvetomir Dimov

6.08.doc. SHOWING THE CAPABILITIES OF VHDL DESCRIPTION AND SIMULINK HDL CODER FOR CONTROL SYSTEM. Krasimira Filipova, Tsvetomir Dimov, Filip Filipov, Denitca Djamijkova

6.09.doc. SMALL E-GOV SATELLITE MODELING AND SIMULATION. Roumiana Ilieava, Silvia Bobeva

6.10.doc. WIND TURBINE WITH HORIZONTAL AXIS FOR OR DOMESTIC WATER SUPPLY. Badea Lepadatescu, Adela - Eliza Dumitrasku, Ioan Enescu

6.11.doc. IMPROVEMENTS CONCERNING THE TRIBOLOGIC REGIME FOR HIGH SPEED BEARINGS. Traian Eugen Bolfa

6.12.doc. THE CORRELATION OF INFLUENCE FACTORS WITH THE WORKING CONDITIONS OF HIGH ROTATION BEARINGS. Traian Eugen Bolfa

6.13.doc. MODELING OF A STAND-ALONE WIND TURBINE SYSTEM WITH ENERGY STORAGE. Marius Georgescu

6.14.doc. CONTROLLED SUN TRACKING SYSTEM WITH STEPPER MOTORS. Marius Georgescu

6.15.doc. TECHNOLOGICAL ASPECTS REGARDING THE SUPERFICIAL STRATUM WORKING USING THE ELECTRON BEAMS. Gheorghe Mareş

6.16.doc. DIAMOND THIN FILMS DEPOSITIONS USING A SYSTEM OF MICRO HOLLOW CATHODE DISCHARGES. Gheorghe Mareş

6.17.pdf. CASE STUDY ON MANUFACTURING PROCESS CAPABILITY OF HEAT EXCHANGERS. Balteanu Alexandru

6.18.pdf. FAILURE MODES AND EFFECTS ANALYSIS OF HEAT EXCHANGERS FOR THE AUTOMOTIVE INDUSTRY. Balteanu Alexandru

6.19.doc. TESTS OF STEERING BOXES WITH CHANGED HYDRAULIC REACTION. Lihtetchi Ioan, Gheorghe Vasile

6.20.pdf. THE FUTURE OF TIMBER IN THE VIEW OF ECO-PRODUCTS MANUFACTURING. Octavia Zeleniuc

6.21.rtf. AN IMPROVING METHOD FOR DETERMINING THE COEFFICIENT OF TOTAL LOSSES FROM THE CHIPBOARD TECHNOLOGY. Aurel Lunguleasa

6.22.doc. EFFECTS OF CHROMATIC DIFFERENTIATION STIMULATION ON ENHANCING CREATIVITY. Elena-Simona Indreica, Camelia Truţa

6.23.doc. ROBOTIC MATERIALS HANDLING EQUIPMENT FOR LIBRARIES. Corina Pop, Gabriela Mailat

6.24.doc. IMPROVING THE PRODUCTION SYSTEM THROUGH OPTIMAL MAINTENANCE ACTIVITIES. Persu Viorel

6.25.doc. MODERN MANAGEMENT CONCEPTS OF MAINTENANCE ACTIVITIES. Persu Viorel

6.26.doc. NEW STUDIES ABOUT CRANK MECHANICAL PRESS PAI 25 FRAME. Ioan Dan, Romeo Cioara

6.27.doc. CAD RESEARCH ON THE TILTED RIBS INFLUENCE UPON PRESS FRAME PAI 25. Ioan Dan

6.28.doc. MODELLING AND RESEARCH ON CARRYING STRUCTURES OF BRIDGE CRANES. Yanko Slavchev, Javier Izurriaga Lerga

6.29.doc. INTERACTION BETWEEN MOBILE ROBOTS WITH ZIGBEE PROTOCOL. Viktor Yordanov

6.30.doc. OPERATIONAL RELIABILITY OF THE VALVES, Dinu Mirela

Section 7. Business and marketing

Section 8. Humanities role

8.01.doc. HISTORICAL INFORMATION-WORKING METHODS RELATED TO THE USE OF SOURCES. Borocman Mariana
8.02.doc. THE SPECIFICATION OF SIGISOARA'S MIDDLE AREA FORTRESSES IN THE MIDDLED AGES. Borocman Mariana
8.03.doc. THE INTERNET AND THE INCREASE OF KNOWLEDGE. Daniela Sorea
8.04.doc. SUBJECTIVITY AND OBJECTIVITY AT ZYGMUNT BAUMAN. Daniela Sorea
8.05.doc. THE GROUPS OF YOUNG MEN IN THE OLT COUNTRY. Gheorghe Rosculet
8.06.doc. THE STRANGER'S RESEARCH TRADITIONS: FROM NEWCOMER TO MARGINAL MAN. Mihai Burlacu
8.07.doc. FREEDOM OF WORSHIP IN CONTEMPORANEOUS TIMES. Bârsan Maria Ionela
8.08.doc. THE ADMINISTRATIVE ACT - FORM AND FORM ELEMENTS. Bârsan Maria Ionela
8.09.doc. ASPECTS OF ENESCO'S PIANO SCORING. Stela Dragulin
8.10.doc. LIFE SATISFACTION AND SELF-IMAGE IN ADOLESCENCE. Aurel Ion Clinciu
8.11.doc. 8 PIANO MINIATURES, A REPRESENTATIVE PIECE FOR COMPOSER SABIN DRAGOI'S INSTRUMENTAL WORK. Daniela Corina Ibanescu
8.12.doc. ENVIRONMENT-ENERGY TERMINOLOGY AND THE COMMUNICATION PROCESS. Mihaela Popescu
